

RECL 4F07 Library Seminar

Ian Gordon, Teaching & Learning Librarian

RECL 4F07 Library Seminar

Agenda

- 10 what's new or different issues of interest!
- What we're not going to talk about (but you should know)
- Scholarly peer-reviewed articles
- What is your research question / topic?
- Search strategies and keywords
- Identifying your appropriate library research guide(s)
- Databases, lots of them
- Citing articles and books using Zotero / zoterobib
- Annotated bibliographies
- Where to get help!

What are the barriers to implementing school-based physical inclusion activities for students with disabilities in Ontario?

10 what's new or different issues of interest!

Your Faculty Library Team

Faculty Library Teams are here to support faculty, staff, and students across the University. There are six teams, one for each of the Faculties of Applied Health Sciences, Education, Humanities, Math and Science, Social Sciences and the Goodman School of Business. Each team consists of three librarians, drawing upon expertise from across the library. Simply email the team associated with your Faculty, and they will help you get an answer to your question.

In addition to responding to inquiries, the Teams are responsible for communicating with the faculty in the academic units within their assigned Faculties, promoting library programs, services, and resources.

MLSE diversity, inclusion executive looking to make a difference inside and out

Davidson, Neil. **The Canadian Press; Toronto** [Toronto]. 11 Feb 2021.

TORONTO - Teri Dennis-Davies is looking to make a difference.

And the new senior vice-president, equity, diversity and inclusion at Maple Leaf Sports and Entertainment wants to do it inside and outside the sports and entertainment behemoth.

The American-born Dennis-Davies, who has called Toronto home since 2011, is now in her fourth month on the job. Some fruits of that labour came out Thursday in the form of an open letter from Dennis-Davies and MLSE president and CEO Michael Friisdahl, accompanied by a written commitment to address systemic racism and advance social justice.

"We recognize that MLSE and its platform is just one small part of a solution to a problem that has plagued our society for generations, but we also know that our influence, and our ability to help make positive change happen in our society, can be powerful and enduring," Friisdahl wrote.

Gulhaab, Justin Morrow, who spent the last seven seasons in Toronto FC colours, was quick to react.

reeted Morrow, who doubles as executive director of Black Players for Change.

to note that MLSE was already working on diversity and social justice before she got there. Executives like the Raptors' Masai Ujiri, Toronto FC's Ali Curtis and the Argos' Pinball Clemons oquent voices.

E, Dennis-Davies says she sees "a tremendous amount of support and commitment to doing things differently."

ere is more to do.

ny time so far," she said. "It has been busy. It has been fast-paced."

ool, her goal was to work in employment law and her resume shows that with a range of corporate jobs revolving around human resources.

like the culmination of my career. It feels like it was designed based on my collective experiences in HR and using even my background in law," Dennis-Davies said in her first interview since

ht role for me at the right time," she added.

o reports directly to Friisdahl, change comes in many forms.

ge from a star player can reach a large audience. An assistant coach of colour behind the Maple Leafs bench can also speak volumes.

not only applicable in the workplace, it's applicable in all aspects of our business. So when we think about the fan experience, we want to make it inclusive for all fans ... When we talk about pliers and partners, that reach is tremendous."

How high school sports became the latest battleground over transgender rights

The Conversation - United States

December 22, 2020 Tuesday 1:35 PM EST

Copyright 2020 The Conversation Media Group Ltd All Rights Reserved

THE CONVERSATION

Length: 1306 words

Byline: Elizabeth A. Sharrow, Associate Professor of Public Policy and History, University of Massachusetts Amherst

Highlight: New legislative proposals want to allow 'sex testing' of girl athletes through genital exams and genetic and hormone testing.

Body

This year, 20 states proposed to ban [transgender girls](#) - meaning those assigned male at birth but who live and identify as girls - from competing on girls interscholastic sports teams.

The only bill to pass was in Idaho. That law [bars transgender athletes](#) from participating in high school and college sports. It also authorizes "sex testing" of athletes through genital exams and genetic and hormone testing.

The [ACLU is challenging the law](#), arguing that it violates civil rights, and a federal court has delayed its implementation. On Dec. 21, [over 60 women's and LGBTQ rights groups](#) and [nearly 200 women athletes](#), including Billie Jean King, Megan Rapinoe and Candace Parker, filed legal briefs contesting the Idaho law and supporting the full inclusion of transgender athletes.

The right of girls and women to compete on sports teams has endured [50 years](#) of policy debate. With [more young people](#) now identifying as transgender, whether transgender girls can compete on girls high school teams has risen to the forefront of these discussions.

Wallace, S. (2015). inclusive education. In A Dictionary of Education. : Oxford University Press. Retrieved 12 Sep. 2022, from <https://www-oxfordreference-com.proxy.library.brocku.ca/view/10.1093/acref/9780199679393.001.0001/acref-9780199679393-e-1152>.

inclusive education

Access to mainstream education, including equal opportunities for progression, for students with learning difficulties or disabilities. It reflects the principle that all learners, regardless of their learning difficulty or disability, should be able to take part in education or training to enhance their quality of life and lead to their improved integration into wider communities. The [Tomlinson Report](#) (1996) set out suggestions of ways in which to improve the organizational culture of learning and training institutions in order to ensure that they respond positively to applications from students with difficulties and disabilities, and are able to acknowledge and address their needs. In recent years the terms [inclusion](#) and '[widening participation](#)' have, in [further education](#) particularly, been used interchangeably to encompass the improvement of learning opportunities for all. However, '[widening participation](#)' derived originally from the main theme driving the [Kennedy Report](#) (1997), which aimed to ensure that all UK citizens over the age of 16 would have equal access to further and higher education.

CHAPTER

Disability and Social Participation

Carrie Shandra

<https://doi.org/10.1093/oxfordhb/9780190093167.013.43>

Published: 14 February 2022

Abstract

Participation is considered a key component of many disability frameworks, yet the concept of *social participation* remains amorphous and contested. This chapter reviews how common disability frameworks conceptualize *activities*, *roles*, and *environments* in relation to participation, discusses challenges to measuring (social) participation through the elements of activities, roles, and environments and describes how time diary data can be used to understand daily life. Finally, it analyzes the nationally representative American Time Use Survey to compare how individuals with and without disabilities spend time in 15 activity categories, across locations and eight types of social interactions. Results indicate that people with disabilities spend more time at home, less time in public places, and less time in transportation than people without disabilities. They also spend more time alone and have less contact with others. However, these results depend upon activity type, illustrating the importance of integrating social and environmental contexts in empirical and theoretical models of participation differences by disability status.

Keywords: disability, social participation, time use, disablement models, functional limitations, activities, roles, environments, United States

Subject: Health, Illness, and Medicine, Sociology

Series: Oxford Handbooks

Introduction

Participation is considered a key component of many disability frameworks (Jette, 2006; Nagi, 1991; World Health Organization, 2001), yet the concept of *social participation* remains amorphous and contested (Levasseur et al., 2010; Piškur et al., 2014; Whiteneck & Dijkers, 2009). Further, definitions that focus broadly on participation as the fulfillment of *roles* in particular types of *environments* fail to consider how people with disabilities are often excluded from many activities and contexts. As the physical and social environments where activities take place are key for understanding how people with disabilities experience everyday life, this chapter adds to the literature on disability and social participation by evaluating the what, where, and with whom of daily activities for a nationally representative sample of people with disabilities.

PHYSICAL ACTIVITY

An important aspect in improving the [health](#) of people with disabilities is to encourage higher levels of [physical activity](#). Not only is [physical activity](#) important from the standpoint of promoting a higher [quality of life](#) by reducing secondary conditions and maintaining functional independence, but it is also essential in terms of reducing health care expenditures. Several reports have noted that a sedentary lifestyle can precipitate functional decline in people with disabilities and that [physical activity](#) must be a targeted health priority to prevent a progressive loss in health and function.

TERMINOLOGY IN [PHYSICAL ACTIVITY](#)

[Physical activity](#) involves all forms of bodily movement produce substantially increases energy expenditure. Subcategories of [physical activity](#) (LTPA), which is a broad descriptor of the activities one participates in during free time, based on personal interests and needs. A structured form of [physical activity](#) is generally referred to as [exercise](#), which is different from other forms of [physical activity](#) by its well-planned, structured, and consistent body movements and repetitions. Other kinds of [physical activity](#) include work-related activity or household activity. Gardening, cleaning, and working in physically demanding jobs (e.g., construction, janitorial) are all considered forms of [physical activity](#). Among people who have a disability or are injured, therapy or rehabilitative [exercise](#) could also be considered a form of [physical activity](#).

[Physical Fitness](#). [Physical fitness](#) is defined as a set of attributes that people have or achieve that relates to the ability to perform [physical activity](#). Components of [physical fitness](#) include cardiorespiratory [endurance](#), muscular strength and endurance, flexibility, body composition (ratio of

EVIDENCE SYNTHESIS & REVIEWS

Library / Research Guides / Systematic reviews, scoping reviews and other evidence syntheses / Evidence synthesis: overview

Systematic reviews, scoping reviews and other evidence syntheses

Overview of evidence synthesis reviews and relevant strategies, tools and resources.

EVIDENCE SYNTHESIS: OVERVIEW

- BEFORE YOU START
- SYSTEMATIC REVIEWS
- SCOPING REVIEWS
- DEVELOP A RESEARCH QUESTION
- WRITE A PROTOCOL
- DEVELOP A SEARCH STRATEGY
- DOCUMENTING & REPORTING YOUR SEARCH
- MANAGE CITATIONS
- SCREENING RESULTS
- EXTRACTING DATA & ASSESSING QUALITY
- REPORTING RESULTS

What is evidence synthesis?

Evidence synthesis:

- also called knowledge synthesis
- uses reproducible and transparent methods to analyze data from multiple primary studies
- refers to evidence that has been:
 - synthesized from a large set of data/studies
 - summarized
 - critically appraised
- synthesized evidence is considered:
 - less biased
 - more rigorous
 - more generalizable

Image: <https://libguides.lib.umanitoba.ca/c.php?g=297452&p=4467117>

Why do we need evidence synthesis?

- Combining and appraising information from multiple studies:
 - helps ensure clinicians use the most appropriate treatment/medication
 - provides evidence-based information to guide health policy and programming
 - reduces unnecessary repetition of research studies

Taking Steps to Inclusion: A Content Analysis of a Resource Aimed to Support Teachers in Delivering Inclusive Physical Education

Lauren Tristani^a, Jennifer Tomasone^{ib}, Heather Gainforth^{ib} and Rebecca Bassett-Gunter^a

^aKinesiology and Health Science, York University, Toronto, Canada; ^bSchool of Kinesiology and Health Studies, Queen's University, Kingston, Canada; ^cSchool of Health and Exercise Science, University of British Columbia Okanagan, Okanagan, Canada

ABSTRACT

Quality inclusive physical activity (PA) programmes have demonstrated vast benefits for individuals with (e.g.) and without disabilities. For example, among people with disabilities, PA participation is related to enhanced social inclusion, reduced risk for secondary health conditions, optimised physical functioning, and improved overall well-being. Although the benefits of PA are well documented, children and youth with disabilities are less likely to participate in PA compared to those without disabilities.

Abbreviations: students with disabilities (SWD); physical activity (PA); physical education (PE); Theory of planned behaviour (TPB); Theoretical domains framework (TDF)

KEYWORDS

Behaviour change; content analysis; health; inclusion; inclusive practice; physical education; professional development; students with disabilities; teacher education

Introduction

School-based PA interventions, including physical education (PE), have been identified as an effective means for increasing PA levels (Adamo et al., 2014). Unfortunately, full implementation of inclusive practices in PE is often hindered, which results in further reduced opportunities for PA among students with disabilities (SWD). Indeed, numerous obstacles impede inclusive PE including systemic barriers (i.e. funding processes), tea-

and institutional barriers). Although various facets that can thwart inclusive (institutional barriers), this teachers 'play a significant round, Subban, & Sharma,

2016, p. 186). The literature is replete with barriers, or predictors, that have been identified as influential factors contributing teachers' behaviours concerning inclusive practices. Such factors include but are not limited to; i) teacher self-efficacy (i.e. the belief(s) a teacher may hold regarding their capacity to teach SWD and/or delivering

Distribution between TDF Domains

Graph 2. Frequency of distribution between TDF domains^a

^aTDF domains acronyms: Kno: Knowledge, Ski: Skill, SPRI: Social/Professional Capabilities, Opt: Optimism, BCon: Belief about Consequences, Rei: Reinforcement, Memory, Attention, and Decision Processes, ECR: Environmental Context, Emotions, BR: Behavioural Regulation.

accounted for a significant proportion of the total content: social/professional role and identity (3.2%), goals (5.1%), and resources (8.2%) made up approximately 16.5% of the content. The remaining categories accounted for less than 9% of the total content.

Quality Participation Model Categories

Graph 3 demonstrates the frequency and percentage of categories within the quality participation model (Martin Ginis, Rimmer, 2016). A substantial portion of the content (31.6%) and mastery (30.8%). Autonomy and engagement (9.9% and 9.5% respectively). The remaining categories (6.9%), accounted just over 18% combined.

Discussion

This study was the first known content analysis to examine targeting inclusive PE. *Steps to Inclusion* was identified as a resource due to the extraordinary need for quality teacher training and for the breadth and scope of the contents. *Steps to Inclusion* is a theoretical perspective and coded content was categorized as predictors of behaviour change and factors related to a large proportion of the coded content was identified as

interventions across various behavioural domains (e.g. Boscart, Fernie, McSherry et al., 2012) but it has yet to be extending into PE. Given its extensive nature to understand behaviour and theoretically inform interventions (e.g. Boscart et al., 2012), the TDF will provide a framework for the examination of the *Steps to Inclusion* teaching resource.

Quality Participation

In addition to considering the theoretical factors linked to teachers' experience, it is also important to consider factors related to the *quality* of student experience. The quality participation model (Martin Ginis, Evans, Moore, 2017) provides a framework for understanding quality PA experience for students with disabilities, including SWD within a PE setting. The framework identifies experience as one that satisfies the following themes: autonomy, challenge, engagement, mastery and meaning (Martin Ginis et al., 2017). The conceptualisation of the quality participation model exemplifies the multiplicity of PA participation and seeks to encompass personal elements which are necessary to delineate quality participation from mere integration (Martin Ginis et al., 2017). Moreover, the six aforementioned themes are necessary to delineate quality participation from mere integration (Martin Ginis et al., 2017). Teacher training resources should aim to support teachers in providing quality experiences for SWD. There is no known research that examines the quality participation model within the PE context. As such, the quality participation model is a second framework to guide the examination of the *Steps to Inclusion* teacher training resource. The purpose of this study was to conduct a content analysis of the teacher training resource to identify content aligned with the TDF (Cane, 2013). This content analysis will inform our understanding of the *Steps to Inclusion* teacher training resource and inform future research regarding teaching tools more generally to support creating quality inclusive PE opportunities for SWD.

Method

Coding Manual and Coding Procedure

A coding manual was developed to enable the researchers to identify and determine the content that was consistent with the TDF and quality participation model (Martin Ginis et al., 2017). This content analysis was derived using both the TDF (Cane et al., 2012) and the quality participation model (Martin Ginis et al., 2017). In total, 21 categories and several subcategories were appraised (see below for a description). Fourteen categories were identified and six categories pertained to quality participation model 'other' category to capture content that did not fit into the aforementioned categories. The 'other' category included content such as titles and subheadings, 'Inclusive Community?', 'Myths and Facts about Cognitive Disabilities', 'What works for one child with ASD may not work for another', and directives to other resources (e.g. Reference Card E').

Taking Steps to Inclusion: A Content Analysis of a Resource Aimed to Support Teachers in Delivering Inclusive Physical Education

ABSTRACT

Quality inclusive physical activity (PA) programmes have demonstrated vast benefits for individuals with (e.g.) and without disabilities. For example, among people with disabilities, PA participation is related to enhanced social inclusion, reduced risk for secondary health conditions, optimised physical functioning, and improved overall well-being. Although the benefits of PA are well documented, children and youth with disabilities are less likely to participate in PA compared to those without disabilities.

Abbreviations: students with disabilities (SWD); physical activity (PA); physical education (PE); Theory of planned behaviour (TPB); Theoretical domains framework (TDF)

KEYWORDS

Behaviour change; content analysis; health; inclusion; inclusive practice; physical education; professional development; students with disabilities; teacher education

Introduction

School-based PA interventions, including physical education (PE), have been identified as an effective means for increasing PA levels (Adamo et al., 2014). Unfortunately, full implementation of inclusive practices in PE is often hindered, which results in further reduced opportunities for PA among students with disabilities (SWD). Indeed, numerous obstacles impede inclusive PE including systemic barriers (i.e. funding processes), teacher-related barriers (i.e. teacher training; Sokal & Katz, 2015) and institutional barriers (i.e. facilities and equipment; Fletcher, Mandigo, & Kosnik, 2013). Although various facets of the education system present with their own unique barriers that can thwart inclusive PE practice (e.g. systemic barriers, teacher-related barriers, and institutional barriers), this paper focuses specifically on teacher-related barriers because teachers 'play a significant role in the successful implementation of inclusive education' (Round, Subban, & Sharma, 2016, p. 186). The literature is replete with barriers, or predictors, that have been identified as influential factors contributing teachers' behaviours concerning inclusive practices. Such factors include but are not limited to; i) teacher self-efficacy (i.e. the belief(s) a teacher may hold regarding their capacity to teach SWD and/or delivering

LESSON

Primary and Secondary Sources

What's the difference between primary and secondary sources? 🧐 Complete this lesson to find out.

VIDEO + ACTIVITY

: 7 minutes

LESSON

Peer Review

In university, you'll be asked to use scholarly, peer reviewed literature in your assignments. This lesson will describe peer review and why it is important.

VIDEO + ACTIVITY

: 8 minutes

What is your research question / topic?

What makes a good research question / topic?

A “good” research question / topic is...

- Clearly defined
- “operationalizable” (easy to translate into a strategy for searching the literature)
- Informed by knowledge of the subject area
- Supported by background evidence
- Not answered by an existing or current research study or review
- Is interesting, novel, ethical and relevant.

Abstract

Background: Even though university students with disabilities are less active than their peers without disabilities, there is scarce knowledge on the predictors of physical activity (PA) in this population.

Objectives: To predict PA in Spanish university students with disabilities using the Theory of Planned Behaviour (TPB) and to examine the role of social ecological barriers within this theoretical framework.

Methods: Participants (N = 1079; Mean age = 40.12) for this cross-sectional study were recruited through the disability care services of 55 Spanish universities. The TPB constructs were assessed using a questionnaire. The Spanish short form of the International Physical Activity Questionnaire was used to measure PA and the reduced Spanish version of the Barriers to Physical Activity for People with Mobility Impairments was used to measure social ecological barriers.

Results: Two different models were computed through path analysis. Model 1 included the traditional TPB constructs and model 2 added a social ecological barriers variable. In both models, attitudes (beta = 0.152; beta = 0.152), subjective norms (beta = 0.114; beta = 0.115) and self-efficacy (beta = 0.657; beta = 0.659) each predicted PA intentions. PA intentions (beta = 0.118; beta = 0.122), self-efficacy (beta = 0.225; beta = 0.207) and controllability (beta = 0.098; beta = 0.075) predicted PA. In model 2, social ecological barriers predicted PA (beta = 0.099). Regression analyses revealed intrapersonal barriers as a significant predictor of self-efficacy (beta = -0.441). Controllability was predicted by intrapersonal barriers (beta = -0.265), community barriers (beta = -0.100) and organizational barriers (beta = -0.095).

Conclusions: Future PA behaviour change interventions should target intentions, self-efficacy and controllability, since they directly predicted PA. These interventions would benefit from considering social ecological barriers to PA. (c) 2019 Elsevier Inc. All rights reserved.

ABSTRACT

Background: Even though university students with disabilities are less active than their peers without disabilities, there is scarce knowledge on the predictors of physical activity (PA) in this population. **Objectives:** To predict PA in Spanish university students with disabilities using the Theory of Planned Behaviour (TPB) and to examine the role of social ecological barriers within this theoretical framework. **Methods:** Participants (N = 1079; Mean age = 40.12) for this cross-sectional study were recruited through the disability care services of 55 Spanish universities. The TPB constructs were assessed using a questionnaire. The Spanish short form of the International Physical Activity Questionnaire was used to measure PA and the reduced Spanish version of the Barriers to Physical Activity for People with Mobility Impairments was used to measure social ecological barriers. **Results:** Two different models were computed through path analysis. Model 1 included the traditional TPB constructs and model 2 added a social ecological barriers variable. In both models, attitudes ($\beta = 0.152$; $\beta = 0.152$), subjective norms ($\beta = 0.114$; $\beta = 0.115$) and self-efficacy ($\beta = 0.657$; $\beta = 0.659$) each predicted PA intentions. PA intentions ($\beta = 0.118$; $\beta = 0.122$), self-efficacy ($\beta = 0.225$; $\beta = 0.207$) and controllability ($\beta = 0.098$; $\beta = 0.075$) predicted PA. In model 2, social ecological barriers predicted PA ($\beta = 0.099$). Regression analyses revealed intrapersonal barriers as a significant predictor of self-efficacy ($\beta = -0.441$). Controllability was predicted by intrapersonal barriers ($\beta = -0.265$), community barriers ($\beta = -0.100$) and organizational barriers ($\beta = -0.095$). **Conclusions:** Future PA behaviour change interventions should target intentions, self-efficacy and controllability, since they directly predicted PA. These interventions would benefit from considering social ecological barriers to PA.

Individuals with disabilities are more likely to experience secondary health conditions, such as type II diabetes or obesity, when compared to individuals in the general population.¹ Becoming and staying physically active can not only mitigate or prevent these negative health outcomes and secondary complications of disability, but also enhance overall health, well-being and quality of life.²⁻⁴ Thus, participating in regular physical activity (PA) is

especially important for people with disabilities. Unfortunately though, this population usually reports low PA levels and, presently, remains one of the most physically inactive segments of society.^{5,6} Establishing successful PA behaviour change interventions appears critical to enhance long-term health and help prevent the risk for secondary health issues within the disability community. This article focuses on university students with disabilities as part of a broader research program that seeks to inform PA promotion interventions for this population in Spanish universities. Typically, university campuses offer a diverse range of leisure-time physical activities, classes and courses to their students and, thus,

Examining Theoretical Factors That Influence Teachers' Intentions to Implement Inclusive Physical Education

L. Tristani^a, S. Sweet^b, J. Tomasone^c, and R. Bassett-Gunter^a

^aYork University; ^bMcGill University; ^cQueen's University

ABSTRACT

Purpose: The purpose of the current study was to apply the Theoretical Domains Framework (TDF) and Capability, Opportunity, Motivation, and Behavior model (COM-B) to examine theoretical predictors of teachers' intentions to implement inclusive physical education. **Methods:** Ontario primary and secondary teachers (n = 383) completed an online questionnaire which assessed potential factors associated with intentions toward implementation of inclusive physical education. **Results:** The final statistical model explained 72% of variance in intentions to implement inclusive physical education with the following theoretical domains identified as significant (p<.05) predictors: knowledge (β .09), professional role and identity (β .22), memory, attention, and decision making (β .14), social influence (β .37), and emotion (β -.20). Regarding the COM-B, the component Motivation explained the greatest amount of variance in intentions to implement inclusive physical education. **Conclusions:** The application of the TDF and COM-B model in this study work to extend current literature through advancing understanding regarding cognitive, affective, and social factors related to teachers' intentions to implement inclusive physical education. Teacher training strategies should take into consideration multidimensional approaches to support teachers' motivations to implement inclusive physical education. Future research and intervention should seek to target and foster factors such as social influences, social/professional role and identity, and knowledge. These factors, in turn, may improve teachers' intentions to implement inclusive physical education.

KEYWORDS

Behavior change; physical education; students with disabilities; theoretical domains framework

Schools may be optimal settings for increasing physical activity (PA), through access to opportunities such as recess, daily PA, and physical education (PE; Dudley et al., 2011). Positive outcomes, such as increased PA (Rimmer & Rowland, 2008), as well as improved skill development (e.g., fundamental motor skills and pattern development) and overall health, have been demonstrated as a result of PE participation (Jin et al., 2018). Inclusive PE¹ programs have the potential to reach and benefit a broad and diverse student demographic, including students with disabilities (SWD; Avramidis & Norwich, 2002; Block, 2007). Due to increasing numbers of SWD in general education classrooms (Statistics Canada, 2013), inclusion has become a cornerstone to teaching practice and an expectation within many school settings, including PE (Ontario Ministry of Education, 2014). Inclusive education is a principled approach "focused on the presence, participation, and achievement" of SWD within the general education classroom (Ainscow et al., 2006, p. 25). Many education systems continue to move away from approaches such as

mainstreaming (i.e., an educational practice whereby SWD are placed in general education classes only during specific times based upon students' skills and support needs; McCall, 2016), and integration (i.e., an educational practice concerned with SWD ability to assimilate into a largely unaltered classroom environment and/or the creation and placement with equal but separate learning environments) and toward inclusion as a more comprehensive practice (Rodríguez & Garro-Gil, 2015). Practically, however, inclusion remains elusive as a result of major discrepancies in both its definition and performance (e.g., Combs et al., 2010).

Inclusive PE may provide SWD with an opportunity for increased PA (Lieberman & Houston-Wilson, 2017; Yun & Beamer, 2018). Effective inclusive PE can work to improve physical and social competencies and increase sport skill performance among SWD (Lieberman & Houston-Wilson, 2017). Students without disabilities can also see improvements in health-related measures (Gilbert, 2019), personal development, as well as communication and attitudes toward individuals with

CONTACT L. Tristani tristani@yorku.ca  York University, Toronto, ON, M3J 1P1, Canada.

¹Inclusive education is concerned with a broad equity agenda and challenges educational practices that marginalize student groups (e.g., visible minorities, SWD, students of low socioeconomic status; Ontario Ministry of Education, 2014). For the purposes of this paper, the term inclusion and/or inclusive education refers to pedagogical practices and processes specific to SWD.

Abstract:	It is unclear whether children with Down syndrome have differing physical activity and sedentary behavior levels compared to typical children. This study addressed this evidence gap in a national sample. Physical activity/sedentary behavior were ascertained by parental report. Findings highlighted that children with Down syndrome were less likely to engage in regular physical activity compared to typical children and had the lowest likelihood of regular physical activity among all subgroups with developmental disabilities/special healthcare needs. Children with Down syndrome were also more likely to watch high volumes of television compared to typical children, although this was nonsignificant upon adjustment for general health. It was concluded that children with Down syndrome are in urgent need for interventions/programs that promote physical activity.

Children with Down syndrome were also more likely to watch high volumes of television compared to typical children, although this was nonsignificant upon adjustment for general health. It was concluded that children with Down syndrome are in urgent need for interventions/programs that promote physical activity.</p> <p>Key Words: <i>Down syndrome; physical activity; sedentary behavior; epidemiology; pediatric</i></p> <div> <p>Down syndrome is the most common chromosomal disorder in the United States, occurring in ~1 in 700 births and prevalent in ~250,000 individuals (Parker et al., 2010; Presson et al., 2013). Down syndrome is characterized by intellectual disability and risk for comorbidities including congenital heart disease, sleep apnea, gastrointestinal anomalies, and visual and hearing impairments (Roizen & Patterson, 2003). It is furthermore characterized by gross motor deficits and delays in development during childhood that are attributed to muscle hypotonia; joint hypermobility; ligamentous laxity; and abnormal alignment and movement at the foot, ankle, knee, and hip (Mik et al., 2008; Roizen & Patterson, 2003). As such, children with Down syndrome may have a diminished ability to engage in physical activity and, subsequently, may be predisposed towards greater cardiometabolic risk both in adolescence and into adulthood (Fox et al., 2019). For example, children and adults with Down syndrome have higher rates of obesity relative to their peers (Bertapelli et al., 2016; Melville et al., 2005).</p> <p>Regular physical activity is an essential health behavior for promoting overall health and well-being across the lifespan (Warburton et al., 2006). In children and adolescents, higher amounts of physical activity are favorably linked to indicators of cardiometabolic and bone health (Janssen & Leblanc, 2010). Evidence suggests these health benefits carry forward into adulthood (Fernandes & Zanesco, 2010; Mantovani et al., 2018; Palve et al., 2014). Accordingly, physical activity guidelines recommend children and adolescents engage in ≥60 minutes of moderate-to-vigorous aerobic physical activity (MVPA) daily, as well as bone-strengthening, and muscle-strengthening physical activities for ≥60 minutes at least 3 days a week (Piercy et al., 2018). With recognition that sedentary behavior (e.g., TV viewing, video gaming, computer use, etc.) may constitute a clinically important aspect of a person's physical activity profile that confers health risk irrespective of MVPA (Biswas et al., 2015), some guidelines also recommend children minimize time spent sedentary (Garber et al., 2011; Tremblay et al.,</p> </div>

Taking Steps to Inclusion: A Content Analysis of a Resource Aimed to Support Teachers in Delivering Inclusive Physical Education

Lauren Tristani^a, Jennifer Tomasone^{ib}, Heather Gainforth^{ib} and Rebecca Bassett-Gunter^a

^aKinesiology and Health Science, York University, Toronto, Canada; ^bSchool of Kinesiology and Health Studies, Queen's University, Kingston, Canada; ^cSchool of Health and Exercise Science, University of British Columbia Okanagan, Okanagan, Canada

ABSTRACT

Quality inclusive physical activity (PA) programmes have demonstrated vast benefits for individuals with (e.g.) and without disabilities. For example, among people with disabilities, PA participation is related to enhanced social inclusion, reduced risk for secondary health conditions, optimised physical functioning, and improved overall well-being. Although the benefits of PA are well documented, children and youth with disabilities are less likely to participate in PA compared to those without disabilities.

Abbreviations: students with disabilities (SWD); physical activity (PA); physical education (PE); Theory of planned behaviour (TPB); Theoretical domains framework (TDF)

KEYWORDS

Introduction

School-based PA interventions, including physical education (PE), have been identified as an effective means for increasing PA levels (Adamo et al., 2014). Unfortunately, full implementation of inclusive practices in PE is often hindered, which results in further reduced opportunities for PA among students with disabilities (SWD). Indeed, numerous obstacles impede inclusive PE including systemic barriers (i.e. funding processes), tea-

and institutional barriers
(. Although various facets
that can thwart inclusive
institutional barriers), this
teachers 'play a significant
ound, Subban, & Sharma,

2016, p. 186). The literature is replete with barriers, or predictors, that have been identified as influential factors contributing teachers' behaviours concerning inclusive practices. Such factors include but are not limited to; i) teacher self-efficacy (i.e. the belief(s) a teacher may hold regarding their capacity to teach SWD and/or delivering

[Annotated Bibliographies](#) (UNC Chapel Hill)

Where to get help!

Where to get help?

- Ask your professor, colleagues, graduate students and research team members for their help
- Contact Brock Library for help, book an appointment... <https://brocku.ca/library/contact/>
- Watch a Library video, engage in a Library learning lesson... <https://brocku.ca/library/video-tutorials/>
- Check out Zotero videos on YouTube for help
- Sign up for an A-Z Learning workshop
- Search the Internet for research guides
- Click on Help tabs for specific databases
- Review the notes for RECL 4F07
- Email Ian Gordon, Teaching & Learning Librarian @ igordon@brocku.ca

RECL 4F07 Library Seminar

Agenda

- 10 what's new or different issues of interest!
- What we're not going to talk about (but you should know)
- Scholarly peer-reviewed articles
- What is your research question / topic?
- Search strategies and keywords
- Identifying your appropriate library research guide(s)
- Databases, lots of them
- Citing articles and books using Zotero / zoterobib
- Annotated bibliographies
- Where to get help!

One thing I learned today.
